Loop AND Learn

Master Your DIY Closed-Loop Insulin Delivery System

In This Issue

- Open Mics Are a Hit!
- iAPS Open Mics
- Customization Update
- CGM Alert Following in Schools

13 August 2023

Twenty-seven Loopers, including two brand new ones, joined us at last week's Open Mic and we had lots of questions, discussion and enthusiasm. Stay tuned for more sessions!

These sessions are not recorded for distribution but "what happens in Open Mic (doesn't) stay in Open Mic". See our [Facebook group post](#) for info about what was discussed and to continue the discussion.

Please join us for our second iAPS Open Mic, as Magnus Reintz and Theresa Hastings focus on **common features and settings**. This session **will** be recorded.

Join Us via Zoom

This Thursday, 17 August
10 am PT / 1 pm ET / 7 pm CET

See [VIDEO](#) from first session

Customization Update

The Loop calculation cycle is started when a new CGM value is detected. This customization limits the CGM-driven cycle to occur no more frequently than every 4.2 minutes. This is very helpful for anyone using a sensor, such as Libre, which reports a value at 1-minute intervals. The pumps compatible with Loop are not designed to be commanded every minute and work better with a 5-minute update rate. [Learn More](#)

CGM Alert Following in Schools

Loop and Learn is proud to be helping with the effort to make U.S. schools enforce ADA law that says they must monitor CGM alerts for T1D kids in their charge on devices provided by the schools. Please see our post and add your voice to the effort. If this concerns you directly, please email your story to FOLLOWT1Ds@gmail.com. See Post on [FOLLOWT1Ds FB Page](#)
