iAPS presentations are hosted as a service to the iAPS community and questions about iAPS should be directed to the iAPS group.

Thank you to Magnus Reintz and Theresa Hastings for sharing their knowledge on **common features and settings**. What a great presentation! They'll be back on 30 August at 10am PT / 1pm ET / 7pm CET to tell us more!

Creative Customization

QUICK
TIPS

One of our Loopers shared how he personalized the **Adjust Future Carbs Time Interval customization**: "I have customized the value to be 90 minutes. We use it for adding carb entries to catch protein rise that we get in almost exactly 90 minutes. Then I do not need to calculate what is the time in 90 minutes, I just click plus or scroll until it does not allow me to add more time and I know that is 90 minutes from now."

How clever!

Q&A from our Facebook Group

Calling attention to a helpful post

Are remote boluses included in IOB/active insulin?

When carbs are entered remotely, is the only option to save without bolusing?

See what our experts said!
